SOLUTRANS Exhibition – Stand C075 (Hall 5)

Chargepoly unveils a compact ultra-rapid charger to facilitate electric HGV and truck charging in logistics depots

With just six days to go before the opening of Solutrans, the leading biennial trade fair for road and urban transport professionals, Chargepoly is presenting a brand-new **ultra-rapid electric charging solution**. Available from **1 March 2024**, this compact yet powerful charger has been specifically designed to make it easier to charge **electric HGVs and rigid trucks** in **logistics warehouses and depots**.

Next Tuesday, the Solutrans exhibition will open its doors at Eurexpo Lyon for four days of innovation, bringing together the key players in transport and mobility. Among the exhibitors: **Chargepoly**, the French specialist in ultra-rapid charging solutions, which will showcase its new **compact charging unit for electric trucks**.

A unique solution for the market

The new Chargepoly charger can be installed on various structural elements: **walls, parking columns, gantries, or solar canopies** – making it particularly suited to **space-constrained depots**.

Installed for example **between two loading bays**, the unit's small dimensions (800 mm height × 300 mm width × 240 mm depth) make it an ideal solution for charging **electric HGVs during loading and unloading operations**.

Other key benefits include:

- **Fast and simple installation**, requiring no costly or complex groundworks.
- **Safer manoeuvring for drivers**, with reduced risk of collision.
- Full compliance with **on-site safety requirements**.

From 1 March 2024, the new charger will be available with a **power output of up to 400 kW**.

“This new compact charger is a direct response to the operational constraints faced by logistics providers and transport operators. With it, we now offer a truly unique market solution that enables fleets of electric HGVs to recharge rapidly and efficiently,” explains **Hadi Moussavi, President and Founder of Chargepoly**.

About Chargepoly

Founded in 2019 by President and CEO **Hadi Moussavi**, Chargepoly is a French Tech industrial company whose mission is to **accelerate transport electrification through innovation**. The company designs, manufactures, and operates a new generation of **high-performance rapid charging infrastructure** for demanding markets such as logistics, public transport, and large public charging hubs.

Tailored for **intensive fleet use**, its patented technology combines customer performance requirements, driver convenience, and energy supply constraints, with high levels of **reliability and scalability**.

Chargepoly provides **turnkey EV charging projects** including equipment supply, software licences, and a full range of services up to full station operation.

The company has already delivered projects for leading **electric truck manufacturers and road hauliers**, as well as public charging hubs in **Clermont-Ferrand and Aix-en-Provence**. A framework agreement has also been signed with a **global supply chain leader** to equip its European depots. Chargepoly now aims to expand further in **Europe and North America**.

Awarded at CES Las Vegas in 2022 in the “Mobility” category and a finalist in the French IP awards (INPI), Chargepoly works in partnership with **Vedecom Institute, Sprint Project, and AVERE France**.

Headquartered at the **Environmental Technology Park in Aix-en-Provence**, the company employs over twenty engineers and commercial staff in **France and Seattle, USA**.
