

## **Renault Trucks selects four electric charging experts for a fully integrated offer**

Renault Trucks, the market leader in electric trucks in France, is strengthening its commitment to customers' decarbonisation strategies. By selecting four specialised charging partners, Renault Trucks is providing fully integrated solutions to support fleets in transitioning to sustainable mobility.

To offer a comprehensive solution for electric trucks, Renault Trucks conducted an in-depth assessment of available charging solutions. The four partners, **BUMP**, **CHARGEPLY**, **MOBILIZE POWER SOLUTION** and **IZIVIA**, were chosen for their technical expertise, knowledge of Renault Trucks' electric vehicles, and the quality of their nationwide infrastructure and services.

### **Decarbonisation beyond the vehicle**

Renault Trucks goes beyond selling electric vehicles. Its objective is to provide a complete decarbonisation solution that integrates both vehicles and charging infrastructure, tailored to fleet size and operational flows.

#### **Selection criteria for partners included:**

- **Project support:** technical site audits, feasibility studies, and assistance with national or local subsidy schemes such as Advenir.
- **Implementation:** selecting qualified service providers, monitoring schedules, and ensuring proper commissioning of equipment.
- **Operations & maintenance:** guaranteed intervention times, remote supervision, spare parts availability, and preventive maintenance planning.

### **Support across four key stages**

With these partners, Renault Trucks provides comprehensive support through four stages:

1. **Understanding customer needs** identify fleet constraints and CO<sub>2</sub> reduction objectives.

2. **Assessing existing fleet and charging requirements** use Renault Trucks' autonomy simulator to evaluate energy consumption, factoring in routes, topography, weather, and speed.
3. **Designing customised solutions** provide all-in-one contracts including financing, insurance, servicing, maintenance, and guaranteed battery performance.
4. **Implementation and operation support** coordinate all parties, including charging partners, and monitor fleet operations via the Renault Trucks network.

Through this strategic partnership, Renault Trucks ensures its customers can successfully transition to low-carbon mobility while maintaining a consistent level of service nationwide.

## About Renault Trucks

Renault Trucks, a French manufacturer, has been delivering sustainable mobility solutions to road transport professionals since 1894, from light commercial vehicles to heavy-duty trucks. Committed to the energy transition, Renault Trucks offers controlled-fuel vehicles and a full range of 100% electric trucks, supported by a circular economy approach to extend vehicle life.

Renault Trucks is part of the **Volvo Group**, a world-leading manufacturer of trucks, buses, coaches, construction equipment, and industrial and marine engines, providing complete financing and service solutions.

### Key figures:

- 9,400 employees worldwide
- 4 production sites in France
- 1,500 sales and service outlets
- 70,000 vehicles sold by 2023

## About CHARGEPLY

Founded in 2019, **CHARGEPLY** is an international technology and engineering company specialising in heavy-duty electric vehicle charging. It offers a complete range of charging solutions tailored to the needs of freight and passenger transport, optimising total cost of ownership for fleets.

CHARGEPLY controls all aspects of its hardware and software technology and has tested its products with leading European truck manufacturers. The company is expanding rapidly, with offices in Europe (head office in Aix-en-Provence, France) and North America (Seattle, USA). It employs around forty people, including five in Seattle.

The majority shareholder of CHARGEPLY is **Voltaia**, a global renewable energy company present in over 20 countries, with 2.9 GW in operation or under construction and 16.1 GW of projects under development. Continuous investment in research and development enables CHARGEPLY to deliver the most advanced charging solutions for rapidly evolving market needs.
